*You still need
someone who knows
the right questions
to ask.*

ON VIBE CODING

01

AI can't pick
your stack.

*You still have to know
the right questions.*

02

AI sees the code.
You see the system.

*It fixes what you point at —
not what's falling apart.*

03

A demo is not
a product.

Vibe code to learn.

Engineer to ship.
